

MyHOME_Suite

1 DESCRIPTION OF THE SOFTWARE

MyHOME_Suite gives the possibility of configuring the devices of the Automation, Energy management, and Temperature control systems preset for virtual configuration. For devices that require programming (for example touch screen, web server, scenario programmer, advanced video handsets), the software is capable of integrating the management of their functions. In case of expansion or modification of existing systems, MyHOME_Suite can scan the configurations of the devices installed for any required modifications. Thanks to the integrated notification function, the user will be notified whenever a new version is available; the update procedure will start automatically. The software also has an in-built wizard function that makes its use easier.

2 PC REQUIREMENTS
