1.0 ABSTRACT

Physical level

The physical communication line complies with the EIA-RS485 standard in half-duplex modality. In this case, as only two wires are used, only one instrument at a time can engage the line; this means that there must be a master which polls the slave instruments so the demand and the request are alternated.

On the same physical line only 32 instruments can be attached (master included). In order to increase the number of the slave instrument, the necessary repeaters must be used.

The communication parameters are :

Baud rate : programmable (device dependant)
bit n. : 8
stop bit : 1
parity : programmable (device dependant)

Data link level

The data are transmitted in a packet form (message) and are checked by a word (CRC). See the description of the data packet in the next paragraphs for more details.

Application level

The communication protocol used is MODBUS / JBUS compatible.

Up to 255 different instruments can be managed by the protocol.

There are no limitations to the number of possible retries done by the master.

A delay between the response from the slave and the next command could be necessary and it is specified for each device (timing).

2.0 DATA MESSAGE DESCRIPTION

The generic data message is composed as following :

Device address	Functional code	Data	CRC word
----------------	-----------------	------	----------

Two answers are possible :

Answer containing data

Device address	Functional code	Data	CRC word
----------------	-----------------	------	----------

Error answer

Device address	Functional code + 0x80	Error code	CRC word
----------------	---------------------------	------------	----------

2.1 Parameters description

Device address : device identification number in the network.
It must be the same for the demand and the answer.
Format : 1 BYTE from 0 to 0xff
0 is for broadcast messages with no answer

Functional code : command code
Used functional code :
Format : 1 BYTE
0x03 : reading of consecutive words
0x10 : writing of consecutive words

Data : they can be
- the address of the required words (in the demand)
- the data (in the answer)

CRC word : it is the result of the calculation done on all the bytes in the message

2.2 Data format

The following types of format are used for the data values :

- * U_WORD : one WORD - unsigned
- * S_WORD : one WORD - signed
- * UD_WORD : two WORDS - unsigned
- * SD_WORD : two WORDS - signed

If the required data is in a DWORD format, 2 WORDS are transmitted and the MSW comes before the LSW (depending on the setting in the NEMO 96 : **big endian / little endian / swap WORDS**)

MSB	LSB	MSB	LSB
Most Significant WORD		Least Significant WORD	

Example : 1000 = 0x 03 e8 or
0x 00 00 03 e8 (if UDWORD)

MSB	LSB	MSB	LSB
0x00	0x00	0x03	0xe8

2.3 Description of CRC calculation

The following is an example of the CRC calculation in C language.

```

unsigned int calc_crc (char *ptbuf, unsigned int num)
/* ***** */
*   Descrizione : calculates a data buffer CRC WORD
*   Input      :   ptbuf = pointer to the first byte of the buffer
*               num   = number of bytes
*   Output     : //
*   Return    :
**  ***** */
{
  unsigned int crc16;
  unsigned int temp;
  unsigned char c, flag;

  crc16 = 0xffff; /* init the CRC WORD */
  for (num; num>0; num--) {
    temp = (unsigned int) *ptbuf; /* temp has the first byte */
    temp &= 0x00ff; /* mask the MSB */
    crc16 = crc16 ^ temp; /* crc16 XOR with temp */
    for (c=0; c<8; c++) {
      flag = crc16 & 0x01; /* LSBit di crc16 is mantained */
      crc16 = crc16 >> 1; /* Lsbit di crc16 is lost */
      if (flag != 0)
        crc16 = crc16 ^ 0x0a001; /* crc16 XOR with 0x0a001 */
    }
    ptbuf++; /* pointer to the next byte */
  }

  crc16 = (crc16 >> 8) | (crc16 << 8); /* LSB is exchanged with MSB */

  return (crc16);
} /* calc_crc */

```

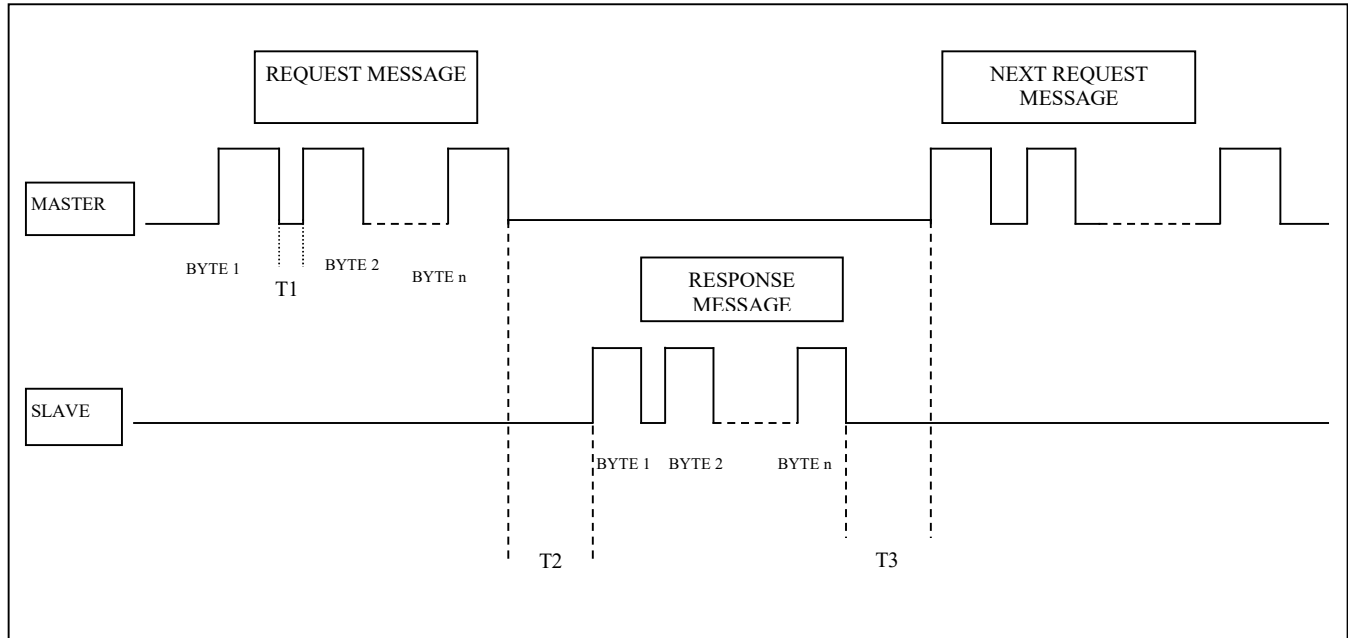

2.4 Error management

If the received message is incorrect (CRC16 is wrong) the polled slave doesn't answer.

If the message is correct but there are errors (wrong functional code or data) it can't be accepted, so the slave answers with an error message.

The error codes are defined in the following part of the document.

2.5 Timing

Be careful : among the setup parameters there is a timeout value that may be programmed. This is the inter-characters timeout and implicitly is the timeout to detect the end of a message. The value of 20 msec is suggested to keep compatibility with older IME devices. The minimum value is 3 msec.

TIME	DESCRIPTION	Min & Max VALUES
T1	Time between characters. If this time exceeds the programmed timeout, the message is considered closed by the device	Min = 3 msec Max <= 99 msec
T2	Slave response time Minimum and maximum response time of device to the Master request after a message has been detected valid	Max = 20 ms.
T3	Time before a new message request from the Master	Min = 1 msec

3.0 COMMANDS

Code 0x03 : reading of one or more consecutive WORDS

Command format :

BYTE	BYTE	MSB	LSB	MSB	LSB		
Device address	Funct. Code	First WORD address		WORDS number		CRC16	

Answer format (containing data) :

BYTE	BYTE	BYTE	MSB	LSB	MSB	LSB	
Device address	Funct. Code	BYTES number	WORD 1		WORD N.		CRC16

The BYTES number must always match the WORDS number (in the demand) * 2.

Answer format (the demand was wrong) :

BYTE	BYTE	BYTE		
Device address	Funct. Code + 0x80	Error code	CRC16	

Error codes :

- * 0x01 : incorrect functional code
- * 0x02 : wrong first WORD address
- * 0x03 : incorrect data

Code 0x10 : writing of more consecutive WORDS

Command format :

BYTE	BYTE	MSB	LSB	MSB	LSB	BYTE	MSB	LSB		
Device address	Funct. Code	First WORD address		WORDS number		BYTE numbers	Word Value		CRC16	

Answer format (containing data) :

BYTE	BYTE	MSB	LSB	MSB	LSB		
Device address	Funct. Code	First WORD address		WORD N.		CRC16	

The BYTES number must always match the WORDS number (in the demand) * 2.

Answer format (the demand was wrong) :

BYTE	BYTE	BYTE		
Device address	Funct. Code + 0x80	Error code	CRC16	

Error codes :

- * 0x01 : incorrect functional code
- * 0x02 : wrong first WORD address
- * 0x03 : incorrect data

4.0 VARIABLES

Variables or groups of variables may be required up to 240 BYTES

0x100	U_WORD	Current transformer ratio (KTA)	No unit
0x102	U_WORD	Voltage transformer ratio (KTV)	1/100 (hundredths)
0x103	U_WORD	Energy mode accumulation	0 :Asyn 1 :Syn 2 :Tariff 3 :Pulse counting
0x300	U_WORD	Device identifier	0x06

Address	Format	Description	Unit
0x1000	UD_WORD	Phase 1 : phase voltage	mV
0x1002	UD_WORD	Phase 2 : phase voltage	mV
0x1004	UD_WORD	Phase 3 : phase voltage	mV
0x1006	UD_WORD	Phase 1 : current	mA
0x1008	UD_WORD	Phase 2 : current	mA
0x100a	UD_WORD	Phase 3 : current	mA
0x100c	UD_WORD	Neutral current	mA
0x100e	UD_WORD	Chained voltage : L1-L2	mV
0x1010	UD_WORD	Chained voltage : L2-L3	mV
0x1012	UD_WORD	Chained voltage : L3-L1	mV
0x1014	UD_WORD	3-phase : active power	(3)
0x1016	UD_WORD	3-phase : reactive power	(3)
0x1018	UD_WORD	3-phase : apparent power	(3)
0x101a	U_WORD	3-phase : sign of active power	[6]
0x101b	U_WORD	3-phase : sign of reactive power	[6]
0x101c	UD_WORD	3-phase : positive active energy	(4)
0x101e	UD_WORD	3-phase : positive reactive energy	(4)
0x1020	UD_WORD	3-phase : negative active energy	(4)
0x1022	UD_WORD	3-phase : negative reactive energy	(4)
0x1024	S_WORD	3-phase : power factor	1/100 signed
0x1025	U_WORD	3-phase : sector of power factor (cap or ind)	0 : PF = 1 1 : ind 2 : cap
0x1026	U_WORD	Frequency	Hz/10
0x1027	UD_WORD	3-phase : average power	(3)
0x1029	UD_WORD	3-phase : peak maximum demand	(3)
0x102b	U_WORD	Time counter for average power	minutes
0x102c	UD_WORD	Phase 1 : active power	(3)
0x102e	UD_WORD	Phase 2 : active power	(3)
0x1030	UD_WORD	Phase 3 : active power	(3)
0x1032	U_WORD	Phase 1 : sign of active power	[6]
0x1033	U_WORD	Phase 2 : sign of active power	[6]
0x1034	U_WORD	Phase 3 : sign of active power	[6]
0x1035	UD_WORD	Phase 1 : reactive power	(3)
0x1037	UD_WORD	Phase 2 : reactive power	(3)
0x1039	UD_WORD	Phase 3 : reactive power	(3)
0x103b	U_WORD	Phase 1 : sign of reactive power	[6]
0x103c	U_WORD	Phase 2 : sign of reactive power	[6]
0x103d	U_WORD	Phase 3 : sign of reactive power	[6]
0x103e	UD_WORD	Phase 1 : apparent power	(3)
0x1040	UD_WORD	Phase 2 : apparent power	(3)
0x1042	UD_WORD	Phase 3 : apparent power	(3)
0x1044	S_WORD	Phase 1 : power factor	1/100 signed
0x1045	S_WORD	Phase 2 : power factor	1/100 signed
0x1046	S_WORD	Phase 3 : power factor	1/100 signed
0x1047	U_WORD	Phase 1 : power factor sector	0 : PF = 1 1 : ind 2 : cap
0x1048	U_WORD	Phase 2 : power factor sector	0 : PF = 1 1 : ind 2 : cap
0x1049	U_WORD	Phase 3 : power factor sector	0 : PF = 1 1 : ind 2 : cap
0x104a	U_WORD	Phase 1 : THD V1	% (0..100.0)
0x104b	U_WORD	Phase 2 : THD V2	% (0..100.0)
0x104c	U_WORD	Phase 3 : THD V3	% (0..100.0)
0x104d	U_WORD	Phase 1 : THD I1	% (0..100.0)
0x104e	U_WORD	Phase 2 : THD I2	% (0..100.0)

0x104f	U_WORD	Phase 3 : THD I3	% (0..100.0)
0x1050	UD_WORD	Phase 1 : I1 average	mA
0x1052	UD_WORD	Phase 2 : I2 average	mA
0x1054	UD_WORD	Phase 3 : I3 average	mA
0x1056	UD_WORD	Phase 1 : I1 peak maximum	mA

5.0 SETUP PARAMETERS

NEMO D4-Le parameters may be red and written accordingly to the procedure described in the following. The variable table to read and write the parameters are located at the same address.

It is allowed to write the setup parameters addressed at 0x2000 and 0x2200 only by a single telegram for each group.

Standard Setup parameters (read and write)

Length : 16 BYTES

           00 00 | 00 00 | 00 00 | 00 00 | 00 01 | 00 02 | 6D C1
    
```

W0 .. W9 / W20 are not used.

Procedure to write

Every write operation must be preceded by a “Master Unlock Key” command.

Address 0x2700 : write word with value = 0x5AA5 (Master Unlock Key)

Reset of NEMO parameters

Any writing operation of any parameter will have effect **only** in the volatile memory (RAM).

After any writing operation of parameters described in the following of the document, if necessary to go back to the default it is mandatory to send the following commands :

Address 0x2700 : write WORD with value = 0x 5AA5 (Master Unlock Key)

Address 0x2800 : write WORD with value = 0x YYYY (any value)

This command will reset the NEMO and in this way all changes will be lost so returning to the previous conditions.

EEPROM savings

If it is necessary to save the new parameters in EEPROM it is mandatory to send these following messages :

Address 0x2700 : write WORD with value = 0x 5AA5 (Master Unlock Key)

Address 0x2600 : write WORD with value = 0x YYYY (any value)

Write address table

Address	Format	Description	Value
0x100	U_WORD	Current transformer ratio	1 - 9999
0x102	U_WORD	Voltage transformer ratio	1/10 (e.g. 4.3 Reading 43)
0x2000	16 U_WORD	Standard setup parameters	(16)
0x2200	24 U_WORD	Programming parameters of pulse and/or alarm output	(16)
0x2400	U_WORD	Reset Hour Meter, Maximum Powers, Maximum Voltages, Maximum Currents, Minimum Voltages, Active Partial Energy, Reactive Partial Energy	(12)
0x2600	U_WORD	Saving in EEPROM parameters changed by Remote commands	(13)
0x2700	U_WORD	Enable Remote Writing Operation	(14)
0x2800	U_WORD	Load previous setup parameters stored in EEPROM	(15)

(12) To reset desired measurements write the following word (in binary) :

0|0|0|0|0|0|0|0|0|b8|b7|b6|b5|b4|b3|b2|b1|b0

b0 = 1 => Reset Hour Meter
b1 = 1 => Reset Peak Maximum Demand
b2 = 1 => Reset Maximum Voltage values
b3 = 1 => Reset Maximum Current values
b4 = 1 => Reset Minimum Voltage values
b5 = 1 => Reset Active Partial Energy
b6 = 1 => Reset Reactive Partial Energy
b7 = 1 => Reset Counter Input 1 (Sw > 1.02)
b8 = 1 => Reset Counter Input 2 (Sw > 1.02)

b9 .. b15 = 0

(13) Write any value to save the new parameters changed by Remote commands

(14) To do any remote programming write operation, it's mandatory to write a safety key = 0x5AA5.

(15) Write any value to abort any remote programming write operation and reload the previous values.

(16) The parameters are read and written with the same sequence.
