## 1. USE

This device works as a standard 2-way switch, but in addition, it switches off automaticaly the light after 10 minutes without movement detection. Particularly adapted to rooms where a light can stay switched on a long time when forgotten (basement, attic, laudry room, guest room) and rooms where user forgets regularly to switch off (child room...).

## 5. OPERATION

■ 5.1 Energy saving switch used as a 1-way

New manual switch ON
new

Manual switch ON

Automatic switch OFF
after 10 minutes without movement detection

The IR sensor is activated when the light is switched on from one of the two switches.
The energy saving switch opens the circuit after 10 minutes with no movement detection.

## - 5.3 Energy saving switch + energy saving switch

The IR sensor of the two switches are both activated when the light is switched on.
The light will switch off when one of the two switches stays 10 minutes with no movement detection.
