❯ What happens with your existing switch?

Once the installation is complete, you control the smart bulb with your wireless lighting control, with the Home + Control App or via a voice assistant. You can then override your existing switch, using solutions **A** or **B**.

A **With the sticker supplied in the pack**
You need to keep your bulb powered. Place your sticker on the switch to keep it in the «ON» position.
B **With the terminal block supplied in the pack**
a. Turn off the power and check that there is no voltage by operating the switch.
b. Remove your existing switch completely (from the flush-mounted box) with a screwdriver.
c. Use the terminal block provided to connect the 2 or 3 wires wired to the switch to be replaced together.
These wires can be of various colours (red, black, orange, brown or purple). If a blue (neutral) wire is present, connect it to another terminal block.
If a blue (neutral) wire is present, connect it to another terminal block separately.
d. Push the connected wires back to the connection terminal at the bottom of the back box. Secure the wireless lighting control with the the screws of the back box. Clip on the cover plate.

❯ Placement of adhesives in case you want to position your wireless control directly on the wall.

Stick the 2 repositionable adhesives on the back of the wireless control

⚠ Before attaching the wireless lighting control using the repositionable adhesives provided, test the bonding on a on-visible area of the wall.
About ⚡ zigbee 3.0 certified product

Zigbee is a communication protocol that allows connected products (lighting, lighting controls, plugs,

roller shutter control...) certified Zigbee 3.0 to communicate and work together. To check if a light is Zigbee 3.0 certified and therefore compatible with your «with Netatmo» connected starter pack

look for the logo on the packaging or on the product's manual. You can also consult the list of all Zigbee 3.0 certified products at the following address: https://csa-iot.org
If you already have Zigbee 3.0 certified products that have their own connection bridge, consider resetting them to be able to use them with your «with Netatmo» connected starter pack. Refer to your products' manuals for the reset procedure
