General information

Warnings and recommendations

It is important to read this manual carefully before proceeding with the installation. The warranty becomes automatically void in case of negligence, improper use, tampering by unauthorised personnel.

The Guard Station must only be installed indoors; it must not be exposed to water drops or splashes; it must be used only on IP DES digital systems.

Warnings and consumer rights

8	Read carefully before use and keep for future reference.
\bigcirc	Touching the units with wet hands is forbidden. Using liquid cleaners or aerosols is forbidden. Blocking the ventilation openings is forbidden. Modifying the devices is forbidden. Removing protective parts from the devices is forbidden. Exposing the unit to water drops or splashes is forbidden. Installing the units near heat/cold sources or hot/cold air emission points is forbidden. Installing the units near heat/cold sources is forbidden. Installing the units near heat/cold sources is forbidden. Installing the units near harmful gases and powders is forbidden. Fastening the units on unsuitable surfaces is forbidden.
A	Danger of electrical shock.
Â	Risk of devices falling because the surface on which they are installed collapses or inappropriate installation. Switch the power supply OFF before any work on the system.
0	Caution: Installation, configuration, starting-up and maintenance must be performed exclusively by qualified personnel. Check that the wall installation has been carried out correctly according to the installation instructions. Check that the unit installation complies with the standards in force. Connect the power supply wires as indicated. Use only the items indicated in the technical specifications for any system expansions.

Fundamental concepts

Naming of the devices

In this manual, for easy reading, the abbreviated device name is used as in the list:

- IU: Indoor Unit
- EP: Entrance Panel
- GS: Guard Station
- SD: Server DES
- SEP: Small Entrance Panel
- AB: Address book
- SW: IP DES SYSTEM

Community

The term Community means the housing complex reproduced in the project design made using the SW.

The structure in its maximum extension includes:

AREA 🔶 BUILDING	➡ RIS	ER 🔶	FLOOR	•	APARTMENT	
Subject Building Spartment 1 Apartment 2 Apartment 1 Open 2 Open 2 Open 2	AREA 1 Apartment 2 Covec Apartment 2	Apartment 1 Over Cover Cover	BULDING 1 Apartment 2 Apartment 1 Apar		AREA 2

COMMUNITY						

Call addressing procedures

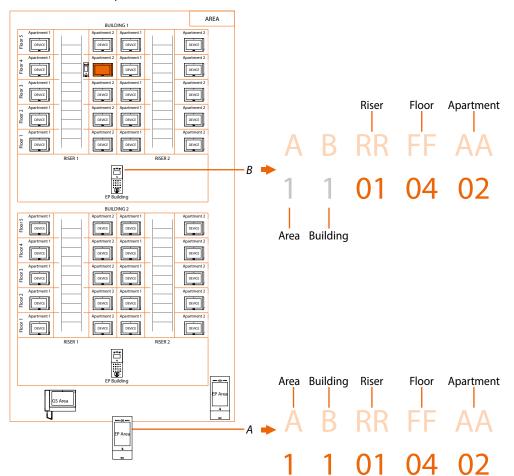

On the basis of data recorded in the AB and the Community structure the calls can be made using various methods:

- call using the address in the Community;
- <u>call using the Alias (alphanumeric code);</u>
- call using the Phonebook.

Call using the address in the Community

To make this type of call you must know the address of the person being called, which depends on the community structure, for example:

- to call the IU highlighted in the diagram from the «A» EP, enter the corresponding address «11010402»;
- to call the IU highlighted in the diagram from the «B» EP, enter the corresponding address
 «010402», as the IU is positioned inside building 1 and therefore it is sufficient to type the Riser, Floor and Apartment number.

Note: during the configuration phase, the number of digits to be used for each call sector (Area/Building/Riser/Floor/Apartment) must be set.

Example: I have to call an apartment inside building 2

- if there are from 1 to 9 buildings in the area, I must enter «2» (one digit used for the Building call sector);

- if there are more than 10 buildings in the area, I must enter «02» (two digits used for the Building call sector).

The system will automatically show the correct number of digits to type and which data to enter on the basis of the EP position you are calling from, for example Area (2 01 06 02) or Building (01 06 02)

System configuration (default) Areas 9, Building 99, Riser 99, Floor 99, Apartment 99 It is possible to modify the limits using the SW (see SW manual for details)

Call using the Alias (alphanumeric code)

The alphanumeric code, by default, is the same address as in the Community but it is possible to replace it with an alias using the SW. For more details see the Software manual. Example:

Call using the Phonebook

In this way it is possible to use the phonebook key and select the contact to call or it is possible to make a call by typing the code (Alias), with the advantage that during typing the system will autocomplete the address; see the software Manual for more detail.

Example:

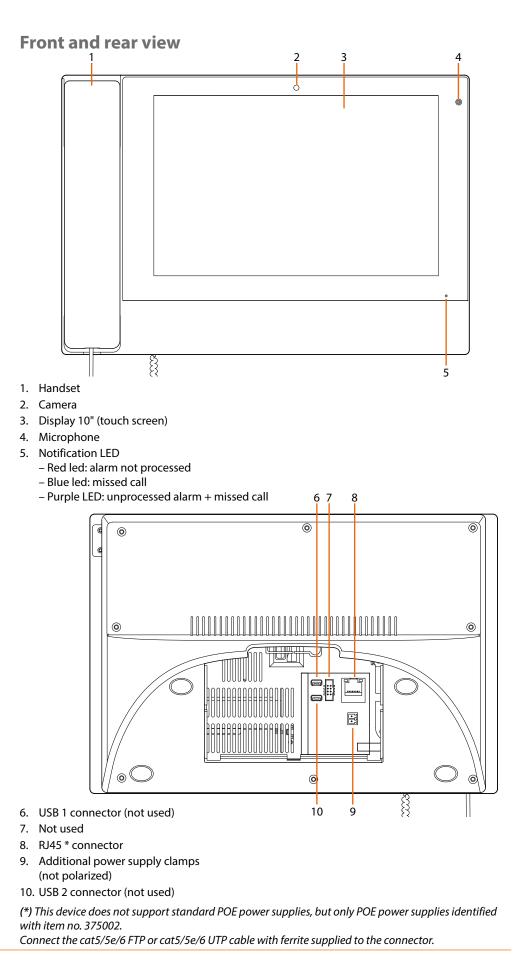

Contacts

The positioning of the objects in their respective locations also allows the creation of the contact lists that they can manage: for example, an EP positioned in the building will only have the contacts of the same building.

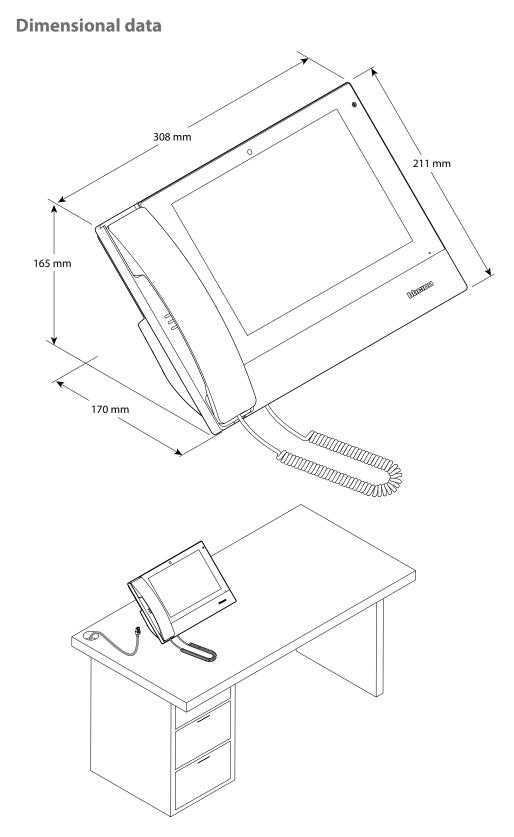

The GS will always have the complete contact list of the entire community

8

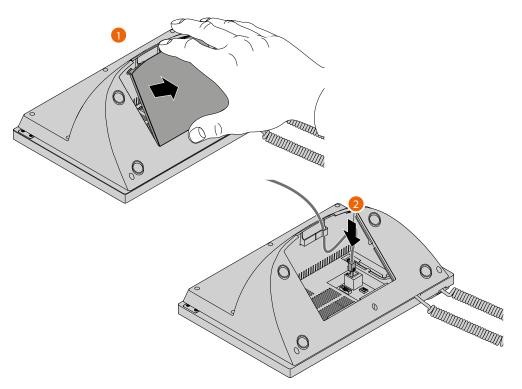

User and installation manual

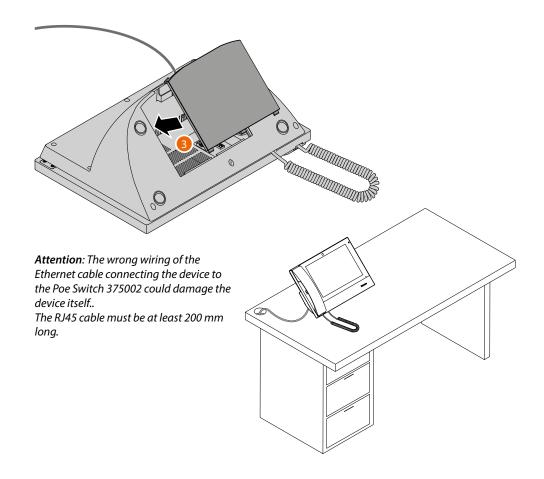

Attention: to ensure correct operation, the GS must be installed indoors, in a position protected from rain and away from heat sources.

Installation

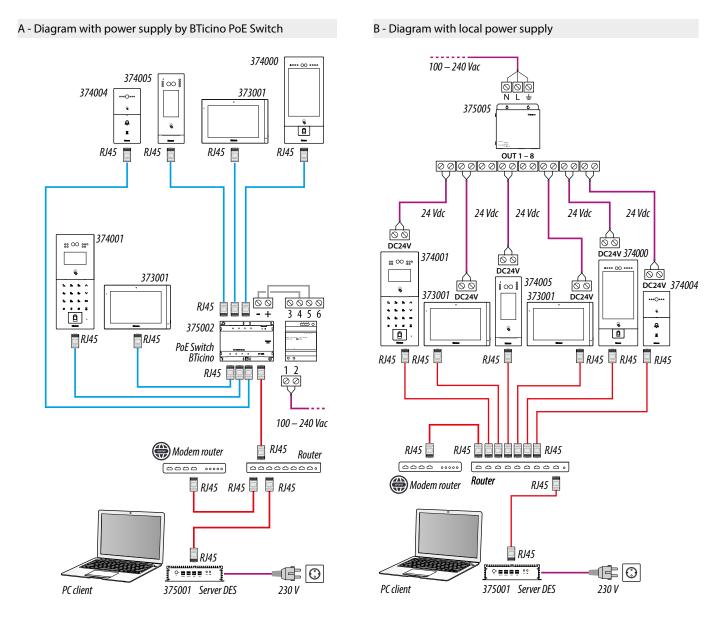

Attention: place the GS on a flat surface, making sure not to damage the display.

Example diagrams

 CABLES LEGEND
 LAN PoE BTicino
 LAN Ethernet
 Copper cables
 2 x Copper cables

It is possible to use two different types of connection according to installation situation:

Attention: this device does not support standard POE power supplies, but only POE power supplies identified with 375002. Connect the cat5/5e/6 FTP or cat5/5e/6 UTP cable with ferrite supplied to the connector.

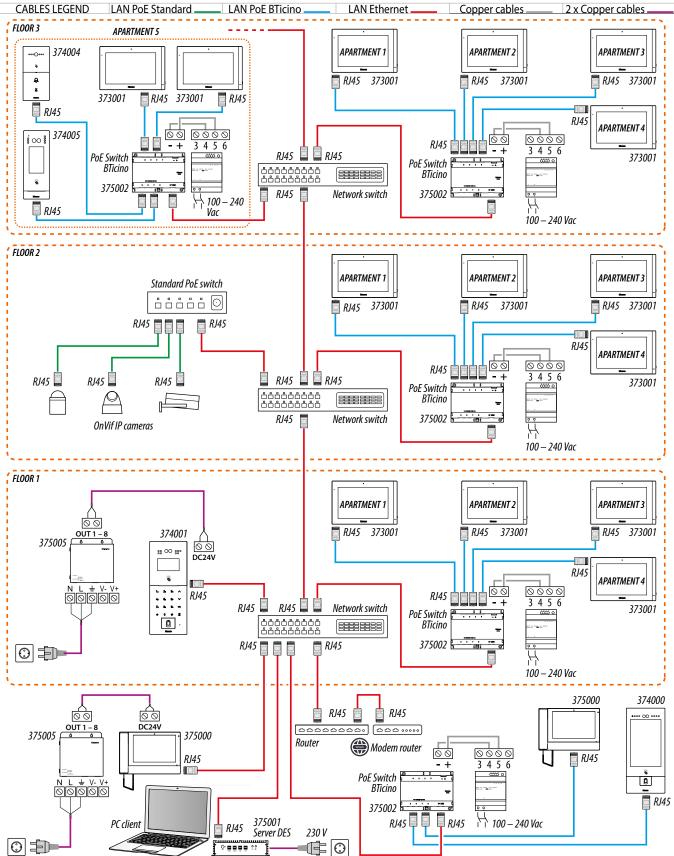

Attention: do not directly connect PoE ports to an unsuitable network interface, such as a device powered by a different voltage. Connect the UP LINK port to a suitable port, never to a PoE port.

Note: to connect the devices it is possible to use both types of wiring (diagram A or diagram B) or even mixed ones.

User and installation manual

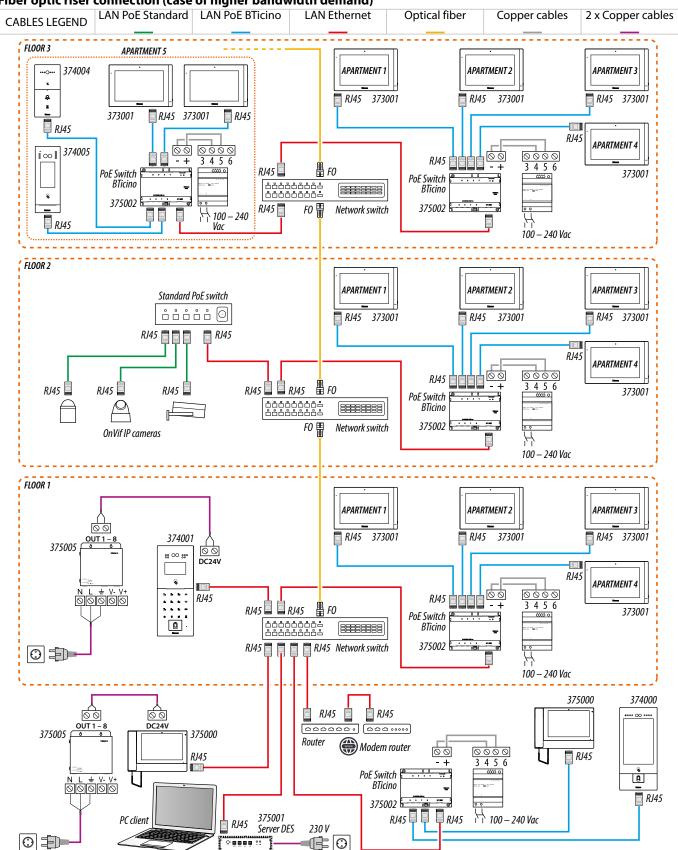

Ethernet connection

Attention: do not directly connect PoE ports to an unsuitable network interface, such as a device powered by a different voltage. Connect the UP LINK port to a suitable port, never to a PoE port.

Note: to connect the devices it is possible to use both types of wiring (diagram A or diagram B) or even mixed ones.

User and installation manual

Fiber optic riser connection (case of higher bandwidth demand)

Attention: do not directly connect PoE ports to an unsuitable network interface, such as a device powered by a different voltage. Connect the UP LINK port to a suitable port, never to a PoE port.

Note: to connect the devices it is possible to use both types of wiring (diagram A or diagram B) or even mixed ones.

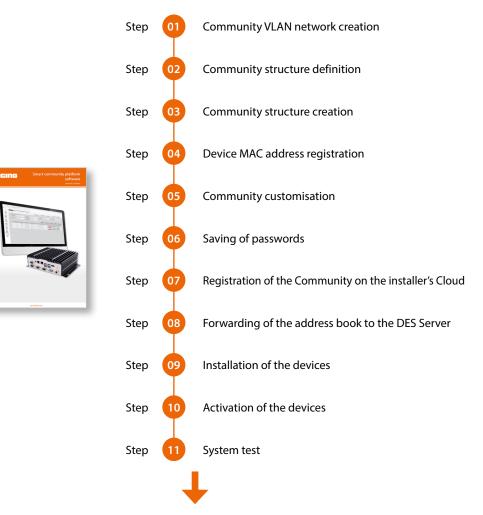

Use of the device

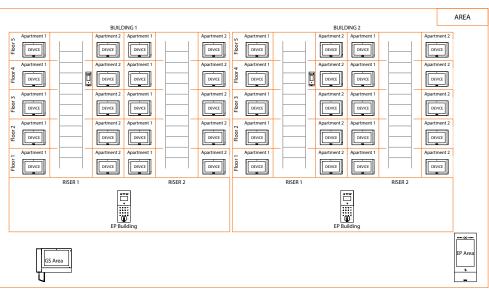

After installing the IP DES Indoor Unit it is possible to:

- Receive a call from EP;
- Transfer a call from the EP to an IU;
- Receive a call from IU or GS;
- <u>Set an absence</u>;
- Call IU or GS;
- Display the images from the cameras
- Manage the alarms
- <u>Customise</u>
- Set the advanced parameters

Introduction

After the installation and connection of the device, it is necessary to configure it and create the Community structure. For details see Server DES Software manual.

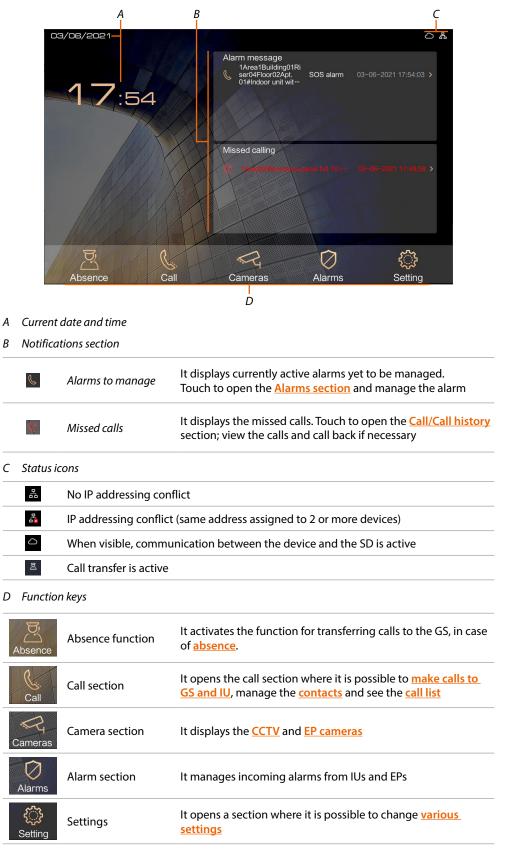

Home page

This page may show different content according to the configuration modes and systems connected to the device.

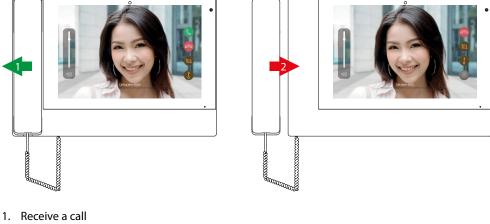

The Home Page, with all the functions enabled, is shown below.

Video door entry functions

To receive or make a call, it is possible to use the function keys or, for increased privacy, the handset provided.

In the first case, the audio will be transmitted through the loudspeaker, while in the second through the handset.

- 2. End a call

- 1. Make a call
- 2. Enter address or alias
- 3. Touch to send the call

Note: the following procedures will show loudspeaker mode.

Receive a call from EP

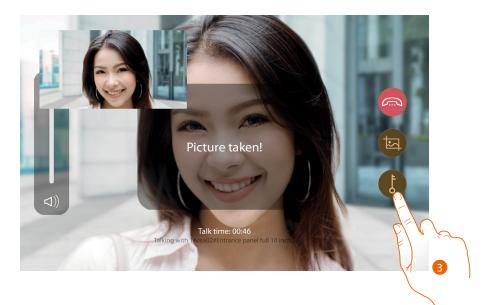

When a call comes in, the display of the GS is activated, showing the image taken. *Note:* if the Absence function is active, the call will be transferred as per the scheduling.

- A It answers the call
- *B* It rejects the call or ends the communication
- C It captures an image
- D It opens the door lock
- E Calling time
- F Address or alias of the device from which the call comes
- G It adjusts the volume
- 1. Touch to answer the call

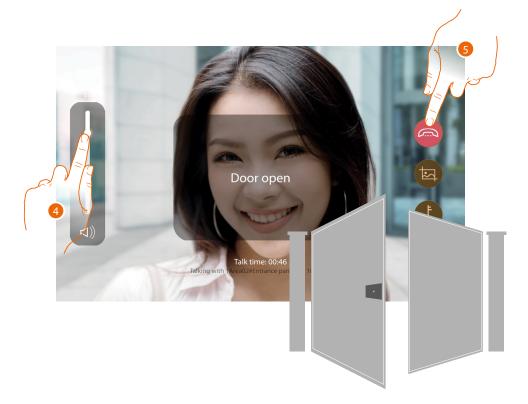

- A It transfers the call to the IU
- 2. Touch to capture an image of the screen

A confirmation message appears, the image will be saved in Call/call history

3. Touch to open the EP door lock

A confirmation message appears

Note: it is possible to open the door lock even without answering the call

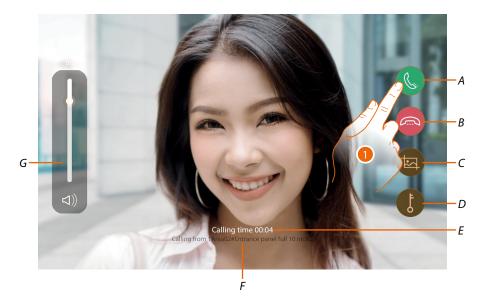

- 4. Tap to adjust the volume
- 5. Touch to end the call

Note: for security reasons, it is not possible to open a door lock without first activating the camera of the corresponding EP.

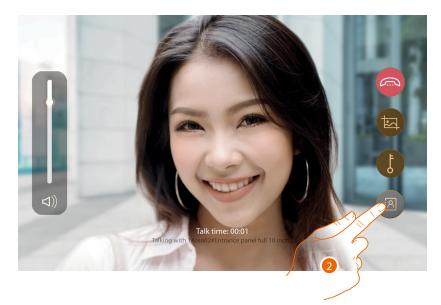

Transfer a call from the EP to an IU

Calls can be answered and if necessary transferred to an IU. *Note:* if the Absence function is active, the call will be transferred as per the scheduling.

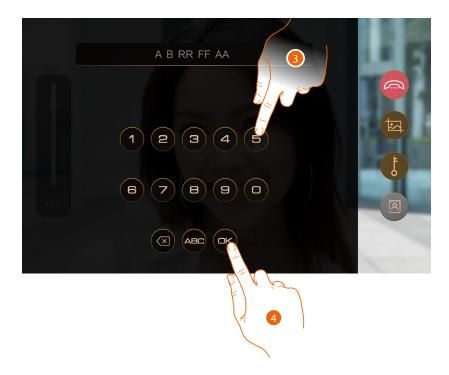

- A It answers the call
- *B* It rejects the call or ends the communication
- C It captures an image
- D It opens the door lock
- E Calling time
- F Address or alias of the device from which the call comes
- G It adjusts the volume
- 1. Touch to answer the call

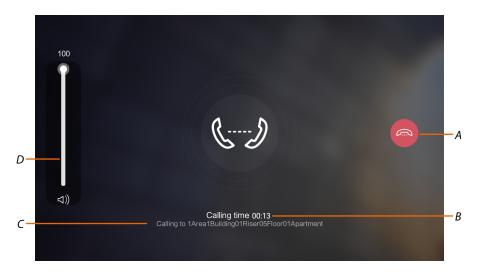

2. Touch to transfer the call from the EP to an IU

User and installation manual

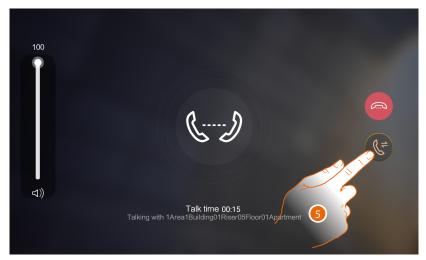

- 3. Enter the address or alias of the IU to which you wish to transfer the call
- 4. Touch to send the call to the IU

Wait for the IU to answer

- A It ends the communication
- B Calling time
- C Address of the device to which the call is made
- D It adjusts the volume

When the IU answers, it sees the images recorded by the EP and the following screen appears on the GS:

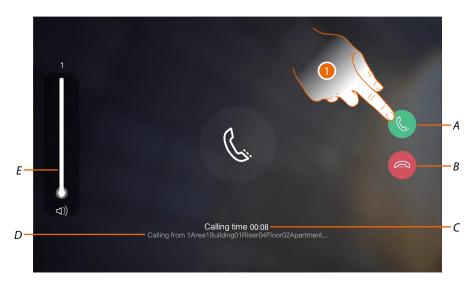

5. Touch to transfer the call to the IU, establishing direct communication between the same and the EP

The Home Page appears on the GS

User and installation manual

Receive a call from IU or GS

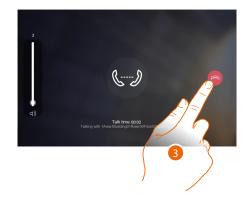

- A It answers the call
- *B* It rejects the call or ends the communication
- C Calling time
- D Address or alias of the device from which the call comes
- E It adjusts the volume
- 1. Touch to answer the call

Audio video call

Audio call

3. Touch to end

User and installation manual

Absence

In this section it is possible to set the way the call is managed when absent:

- <u>Quick Absence</u> in case of temporary absence, calls will be transferred according to the scheduling.
- <u>Scheduled absence</u> in case of scheduled absence, calls will be transferred according to the scheduling.
- Transfer list status displays active transfers and if necessary stops them

Quick absence

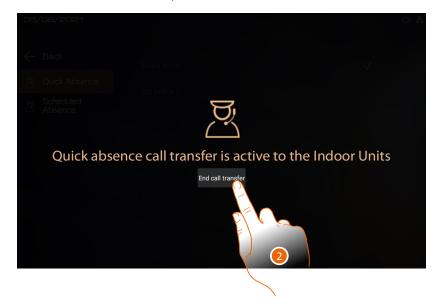

The function can be enabled with 2 different modes:

- Direct to IUs: the call is not intercepted by the GS but transferred directly to the IU to which it
 was originally addressed
- **GS**: the call is transferred to another GS

Note: If the call from the EP is directly addressed to a GS and the GS has set Direct to IUs, the call will not be transferred to anyone.

The GS to which you want to transfer the calls receives a message and must confirm

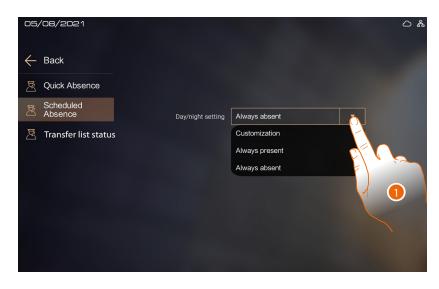

4. If the GS confirms, the GS transferring the call shows the transfer active screen. Touch to stop the transfer

Scheduled absence

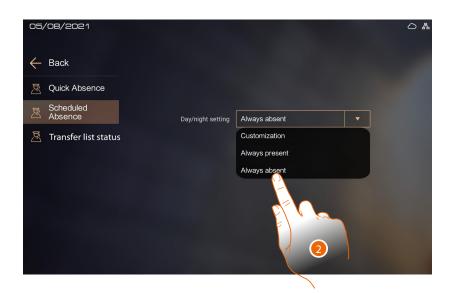

The function can be enabled with 3 different modes:

- Always absent (default): the call is always transferred
- Always present: the call is not transferred
- **Customization**: the call is transferred for a set period of time

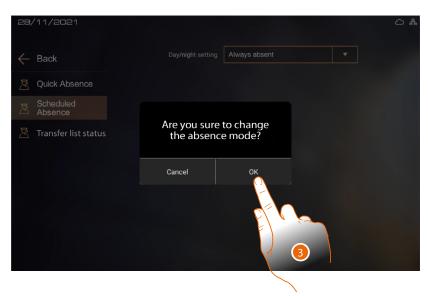

1. Select the mode

User and installation manual

The default setting is Always present and therefore the call is not transferred

2. Touch Always absent if you need to permanently transfer the call

3. Touch to confirm

User and installation manual

Call IU or GS

In this section it is possible to communicate with other IU or other GS. It is possible to call an IU or GS in different ways:

- <u>call using the address in the Community;</u>
- <u>call using the Alias (alphanumeric code);</u>
- call using the Phonebook.

The call mode depends on how the community has been configured using the SW. For details see <u>Fundamental concepts</u>

Call using the address in the Community

- 1. Enter the address in the IU or GS Community, the device helps you by showing the fields to be entered (e.g. 1 01 04 02)
- 2. Touch to send the call

Call using the Phonebook

C77068/26021 T1010101 T1010102 Call Call Patery Call Patery Jacom Hourson Jacom Hourso

- 1. Touch to open the phonebook where all the community contacts are present
- 2. Touch the code to send the call
- 3. Otherwise, type the contact name saved in the phonebook (e.g. JHONSMITH). The system suggests the contacts by means of the self-completion function.
- 4. Touch the suggested contact to send the call

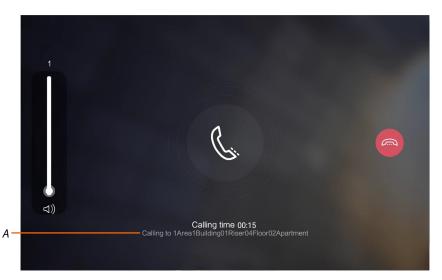

Note: in the call using Alias mode, the default code corresponds to the address in the Community as long as the Server DES software has not altered it in the address book

Call using the Alias (alphanumeric code)

- Enter the alias created using the SW (e.g. B12)
- 2. Tocca per inviare la chiamata

User and installation manual

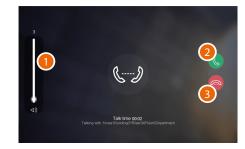

Wait for the person being called (A*) to answer

The IU being called can decide whether to activate an audio only or audio&video communication. **Note**: the video communication is active only for IU item 373001/02 with enabled camera or GS. ***Note**: the caller display depends on how the community has been configured using the software. For details see <u>Fundamental concepts</u>

Audio video call

- 1. Tap to adjust the volume
- 2. Touch to answer
- 3. Touch to end the communication

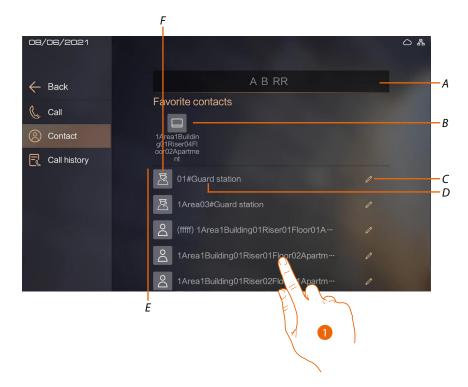

Audio call

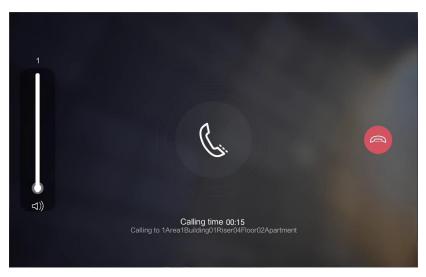

Contacts

In this section it is possible to manage and call the contacts (IU and GS). Often called contacts may also be included in the favorites.

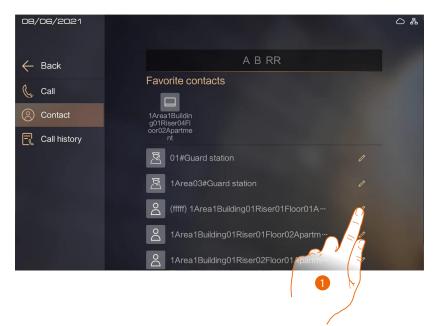

- A Contact filter: if details are entered in the filter, the relevant list of contacts will only show contacts meeting the filter settings: for example, when entering 1203, only contacts with address Area=1 Building=2 and Riser=03 will be displayed
- B Favourite contacts area
- C Modify contact
- D Address/name of the contact
- E Contacts
- F Type of contact
- 1. Touch to the call the contact

The call is sent immediately; see the <u>Call IU or GS using the address in the Community or</u> <u>alphanumeric code (alias)</u> section for details.

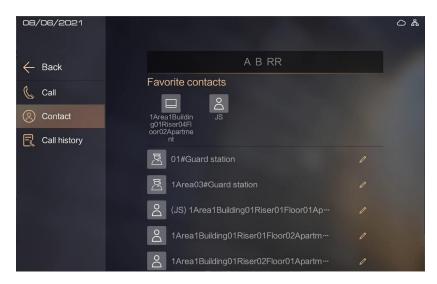

1. Touch to modify a contact

User and installation manual

- 2. Touch to enter a contact name
- 3. Select the contact type icon
- 4. If necessary, touch to add the contact to the favourites
- 5. Touch to save

User guide

In this section it is possible to download this manual using the QR code

Advanced settings (Installation settings)

In this section it is possible to set different parameters such as installer password, date and time and to perform tests and resets.

1. Touch to modify the advanced settings.

Warning: access to the Advanced Settings should only be attempted by experienced people, as wrong actions could compromise the operation of the device

2. Enter the installer password (the password can be viewed in the device parameters section of the SW)

Caution: Save the passwords in a safe place that is always accessible. (Cloud backup activation recommended).

If both the SD and the backup are unavailable, it will not be possible to retrieve the passwords.

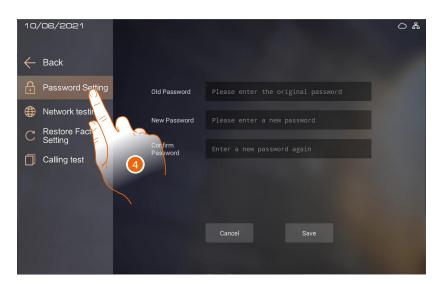

Note: The passwords of the devices incorrectly activated in DEMO mode are: 2000 (EP) and 1111 (IU and GS)

Note: for safety reasons, modify the password.

3. Touch to confirm

Note: it is not possible to enter this section if there are active alarms

4. Touch the icon for the desired customisation, choosing among:

Password Setting	It sets the <u>installer password</u>
Network testing	It performs <u>a network test</u>
C Restore Factory Setting	It restores the <u>factory values</u> of the device
Calling test	It makes <u>test calls</u> to test the system

Password setting

In this section it is possible to modify the installer password

Caution: Save the passwords in a safe place that is always accessible. (Cloud backup activation recommended).

If both the SD and the backup are unavailable, it will not be possible to retrieve the passwords.

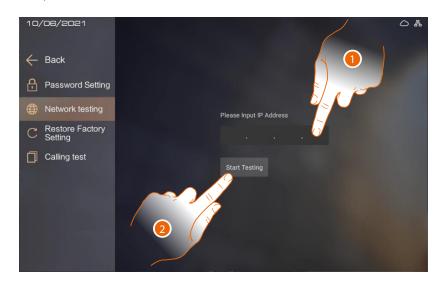

Note: The passwords of the devices incorrectly activated in DEMO mode are: 2000 (EP) and 1111 (IU and GS)

- Contraction		Cancel Save	

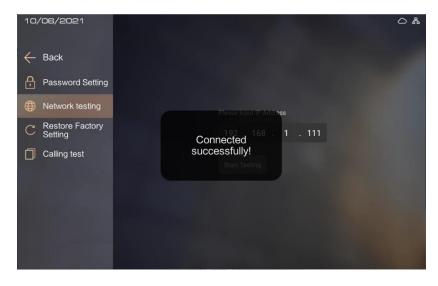

- 1. Enter the old installer password
- 2. Enter the new installer password
- 3. Enter the new installer password again
- 4. Touch to confirm

Network testing

This function performs call tests of devices whose IP address is known.

- 1. Enter the IP address of the device to test the connection.
- 2. Touch to start the test

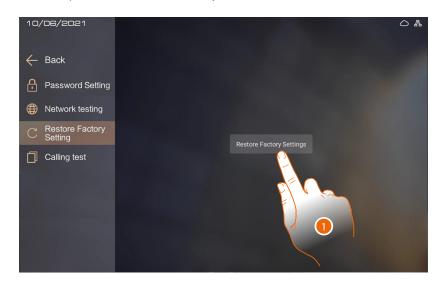

If the test is successful, a confirmation message appears

Restore factory settings

In this section it is possible to restore the factory values of the device

1. Touch to start the procedure

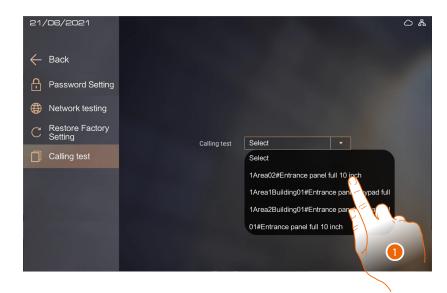

Warning: all settings will be deleted and the parameters will be restored to factory values
