General description

With the use of specific devices, the UXOne hotel system allows the user to control various functions of their own room, while the manager can supervise all the rooms in the hotel.

Functions such as:

- Room status (presence, make up room MUR, do not disturb DND)
- Heating/Air conditioning
- Automation
- Lighting
- Scenarios
- Access control

can be controlled by the customer via the UXOne connected thermostat and other devices in the room (e.g. DND/MUR controls).

The reception desk can supervise the rooms and common areas using the Hotel Room Supervision software in conjunction with the Hotel server.

Therefore, this manual consists of 2 parts:

Hotel Room Supervision user manual

This chapter provides all the information on how to remotely supervise rooms using the Hotel Room Supervision software

UXOne thermostat user manual

This chapter consists of a short, customisable guide explaining the functions of the thermostat. Since the available functions depend on the type of thermostat and the configuration made by the installer, the guide can be customised for each room and given to the customer.

Hotel Room Supervision user manual

To access Hotel Room Supervision, type an http address into a browser to connect with the Hotel server pages.

→ ♂ ⋒ ⊕ https://192.168.1.20	1/ans/index.html	¢= @

- 2. Click to display the advanced options
- 3. Click to ignore the warning and proceed

User manual

Authentication

- 1. Enter the user name (Admin).
- 2. Enter the Admin password: (the password to access Hotel Room Supervision can be found on the Hotel Server label)

NOTE: The password can be changed in the <u>specific menu</u>, However, the password on the label will still remain valid.

3. Click to access Hotel Room Supervision.

A screen will open, showing the legal notices and the privacy policy.

NOTE: The legal document screens only appear during the first login. Later on they can be viewed by accessing the <u>Information</u> section.

2. Click to select the fan speed: Speed 1, Speed 2 e Speed 3

User manual

3. Click to select the temperature setpoint used by UXOne:

Thermal protection = temperature set when the room is not used for a long time (e.g. seasonal closure)

Eco = temperature set when no one is in the room

Comfort = temperature set when someone is in the room

Pre-comfort = temperature set a few hours before the room is occupied

NOTE: The "**Thermal protection/Eco/Pre-comfort**" temperature setpoint values are set by the installer, while the Comfort mode temperature can be <u>adjusted</u> using the Hotel Room Supervision software or UXOne.

Change password

This section can be used to change your Hotel Room Supervision access password.

NOTE: For the Administrator user, it is actually a matter of adding a new password, as the default password (found on the server label) is always valid and cannot be changed.

E.g.: after the Administrator changes their password, for example setting "HotelRoom75%", as their personal password, they will be able to access Hotel Room Supervision with both HotelRoom75% and the default password found on the server label.
