

DALI-2 Gateway F429G

Description

The device is an interface between MyHOME/Lighting Management systems and devices driven using the DALI-2 (Digital Addressable Lighting Interface) protocol.

It has 1 independent output to manage up to 64 DALI-2 ballasts. The supported functions are: ON/OFF, dimmer, RGB, RGBW e Tunable White, Fade in-out.

The device can be installed in a MyHOME system through Home + Project app configuration. Suitable for installation with all DALI-2 lamps.

The buttons with respective notification LEDs set the SCS and DALI operating modes. The SCS button (7) sets the device for virtual configuration, the DALI button (3) is used to turn the DALI output on and off.

NOTE: The DALI-2 function is available and supported only by Classe 300EOS, MyHOME F460 and F461 servers.

In case of existing installations with the MHS1 server, it is possible to guarantee the system upgrade and functional extension through the backup & restore function directly from Home + Project, without having to reconfigure the system from scratch.

Technical data

Operating temperature: 5-40 °C

BUS SCS input

Power supply: 18 – 27 Vdc Absorption: 6 mA

Input 230 Vac

Voltage: 110 – 240 Vac Operating frequency: 50/60 Hz Absorption: 70 mA max

DALI output

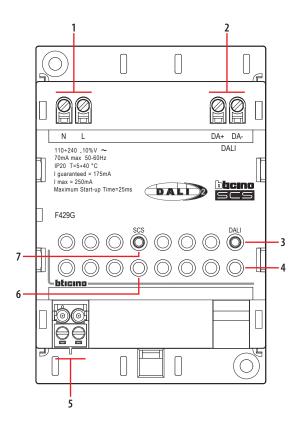

Rated voltage; 16 Vdc Rated power: 4 W Max. current: 250 mA **Guaranteed current:** 150 mA Maximum Start-up Time: 25 ms Number of DALI devices that can be controlled: 64 Maximum length of the cable: 300 m Cable section: 1,5 mm² Compatible DALI loads:

Compatible DALI-2 loads: DTO, DT6, DT8 (up to RGBW on single

channel)*

* **Note:** Check that the Dali certification (Dali or Dali2 logo) is present on the device. The device must included in the Dali Alliance product database (www.dali-alliance.org).

Front view

Legend

- 1. PRIMARY connection clamps
- 2. Connections clamps for DALI GEAR control *
- 3. Maintenance pushbutton, simultaneous ON/OFF control of all DALI loads. The status of the loads is not shown on the device
- 4. DALI output notification LED Orange LED steady = at least one load on the DALI output is ON Green LED steady = all the loads are OFF Orange/green LED flashing = addressing and acquisition of DALI loads running
- 5. BUS SCS connection clamps
- BUS SCS output notification LED
 Green LED steady = power supply present
 Orange/green LED flashing quickly = no configuration
 Red LED flashing intermittently = configuration being completed
- 7. SCS configuration pushbutton
- * Note: The device is designed to be the only BUS power supply in the system

Dimensional data

Size: 4 DIN modules.

Configuration

For device configuration and installation and for any other information, refer to the following instructions or to the documentation available in the on-line catalogue of the device.

Download App

Home + Project

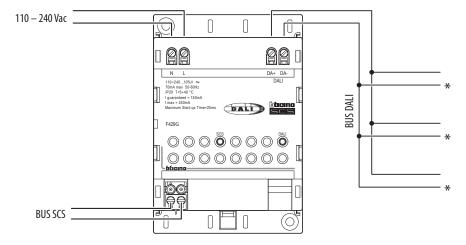

Google Play: it is recommended the use of the latest version of Android with access to Google Play

iOS: to control this HomeKit accessory, we recommend the use of the latest version of iOS or iPadOS

Wiring diagrams

* DALI devices: max 64 devices.

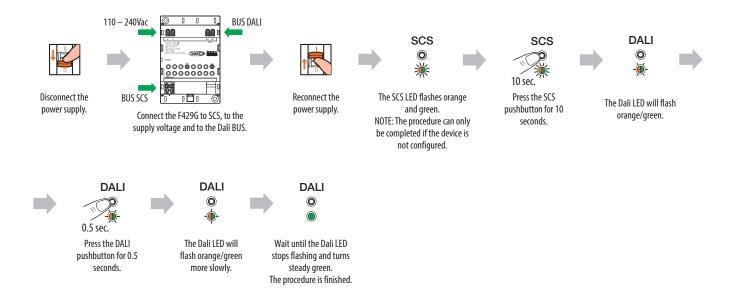

Addressing and acquisition of reactors

It is strongly recommended to install only DALI non-configured loads: the address of loads is assigned by the device.

If it is absolutely necessary to use loads that are already configured, please refer to the "Addressing and acquisition of reactors - already with address" section in order to restore the correct configuration.

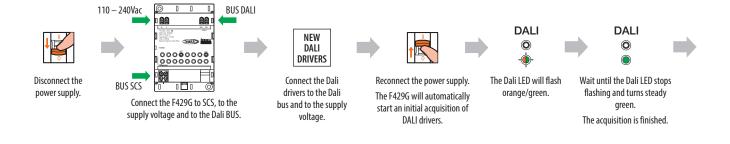

LED legend				
		•	- <u>~</u>	*
Steady green	Steady orange	Orange/green 0,5 ON / 0,5 OFF	Orange/green 0,2 ON / 0,5 OFF	Orange/green 0,1 ON / 0,1 OFF

Procedure to be followed when configuring the F429G device for the first time regardless of the reactor conditions

Addressing and acquisition of reactors – without address

Procedure to be followed when installing the new F429G device and new Dali drivers for the first time

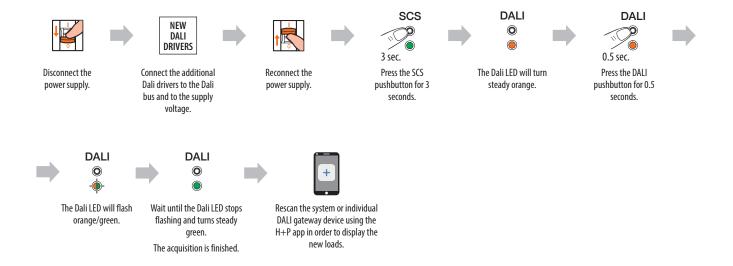

Rescan the system or individual DALI gateway device using the H+P app in order to display the new loads.

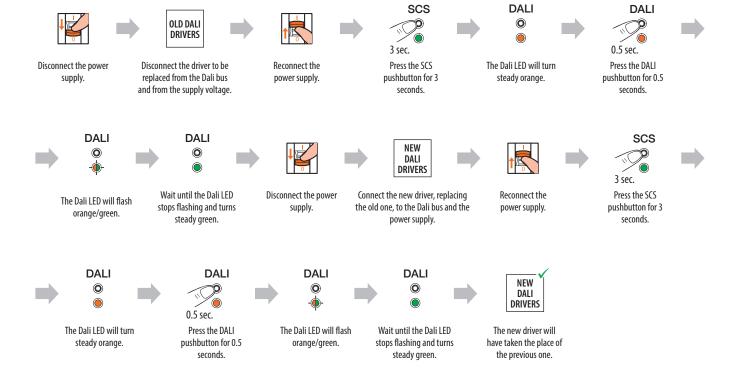

DALI-2 Gateway F429G

Procedure to be followed when adding new drivers

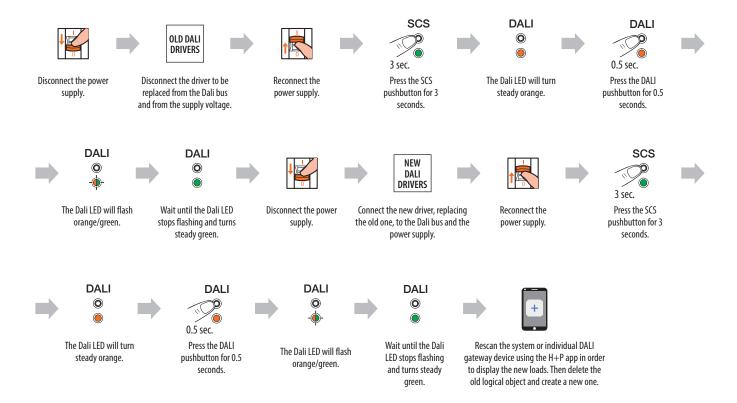

Procedure to be followed when replacing a Dali driver with one of the same type (dimmer only, TW, RGB)

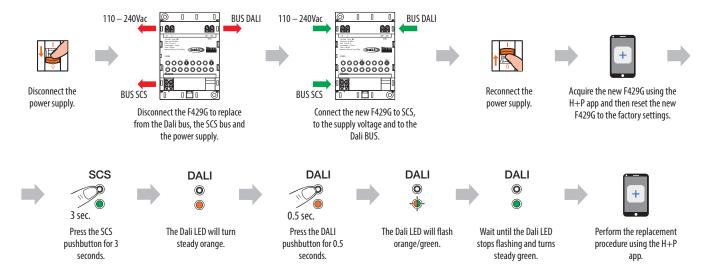

DALI-2 Gateway F429G

Procedure to be followed when replacing a Dali driver with one of a different type

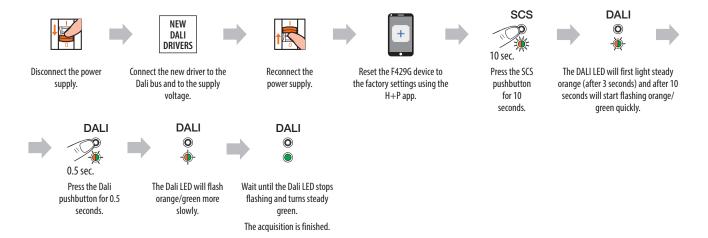

Procedure to be followed when replacing an F429G device with another already used

Note: In case of replacement with a new F429G device, the acquisition procedure will be started automatically. Once the Dali LED stops flashing, it will only be necessary to perform the replacement procedure required by H+P.

Addressing and acquisition of reactors – already with address

Procedure to be followed when installing Dali drivers already with an address, already used on another system

Note: Alternatively, DALI-specific tools can be used to independently change driver addresses without having to delete everything.
